Retail Feedback & Loyalty Program

A connected customer experience system — feedback, loyalty points, redemption, and manager-level insight, all in one platform.

Objective

Turn everyday shopper feedback into a rewarding, ongoing relationship.

Submit Feedback

Customers share reviews and comments on products or stores.

Earn Loyalty Points

Every piece of feedback earns reward points automatically.

Redeem Rewards

Points can be redeemed for real rewards from a catalog.

Manager Insight

Managers analyze feedback trends to guide decisions.

Data Model

Four objects connect the customer to their feedback, points, and rewards.

Automation & Apex Logic

Backend logic keeps feedback clean, points accurate, and status current.

Trigger — Feedback Processing

An Apex trigger on Feedback__c that rewards customers and filters bad language.

1 Trigger Event

Runs after a new Feedback__c record is inserted.

2 Auto-Assign Points

Creates or updates a Loyalty Point record for the customer.

3 Profanity Filter

A regex validator blocks or flags inappropriate language before saving.

4 Why It Matters

Customers are rewarded instantly, and feedback quality stays high.

Batch Apex — Loyalty Status Update

A scheduled batch job that recalculates every customer's loyalty tier each month.

1 Schedule

Runs automatically once a month via a scheduled batch job.

2 Processing

Iterates through all customers in manageable batches.

3 Update

Recalculates and updates each customer's loyalty tier/status.

4 Benefit

Loyalty tiers always reflect a customer's latest activity.

Flow — Point Redemption

A guided flow that powers the redemption form and its underlying logic.

1 Entry

Customer opens the redemption form from the Rewards Catalog.

2 Validation

Checks the customer has enough loyalty points for the chosen reward.

3 Action

Creates a Redemption record and deducts the points used.

4 Outcome

Customer sees an updated balance and confirmed redemption.

What is a Lightning Web Component?

Salesforce's modern UI framework — used here for the shopper-facing experience.

In Simple Terms

LWC (Lightning Web Component) is how Salesforce builds fast, reusable, modern screens inside its platform — the same way a shopping app has interactive stars, forms, and progress bars.

Instead of a plain, static page, an LWC screen reacts instantly: submit a review, and your points balance updates right away — no page reload.

For this project, LWC is the layer every shopper actually sees and taps — from leaving feedback to redeeming a reward.

Why LWC for This Project

Instant Feedback

Star ratings, comments, and images submit without a page reload.

Live Points Balance

The rewards widget updates the moment points are earned or spent.

Native to Salesforce

Stays directly connected to Customer, Feedback, and Loyalty data.

Reusable by Design

The same components can extend to new stores or channels easily.

Lightning Web Components — In Detail

Three components carry the customer through feedback, points, and rewards.

1

Submit Feedback Modal

Used by: Customers

A pop-up form for leaving a review with text, rating, and image.

-
- Star rating input
 - Free-text comment box
 - Optional image upload

2

Points Tracker Widget

Used by: Customers

A live display of the customer's current loyalty balance.

-
- Real-time point balance
 - Updates instantly on earn/spend
 - Visible across the experience

3

Rewards Catalog

Used by: Customers

A browsable, filterable catalog of redeemable rewards.

-
- Filter by category or cost
 - One-click redemption
 - Shows affordable rewards first

LWC — Submit Feedback Modal

The pop-up form customers use to leave a rating, comment, and photo.

1 Inputs

Star rating, free-text comment, and an optional product image.

2 Validation

Requires a rating before the comment can be submitted.

3 On Submit

Calls Apex to insert the Feedback record and hands off to the Trigger.

4 Confirmation

Shows a success toast and closes the modal automatically.

LWC — Points Tracker Widget

A small, persistent widget that shows a customer's live loyalty balance.

1 Data Source

Wires to Apex to pull the logged-in customer's Loyalty Point total.

2 Live Updates

Refreshes automatically after feedback or a redemption is submitted.

3 Placement

Displayed across the feedback and rewards screens for visibility.

4 Purpose

Keeps customers motivated to keep earning and engaging.

LWC — Rewards Catalog

A filterable catalog where customers browse and redeem available rewards.

1 Filter Input

Category and point-cost filters narrow down the reward list.

2 Data Source

Calls Apex to fetch active rewards matching the chosen filters.

3 Redemption

Selecting a reward launches the Point Redemption flow.

4 Feedback

Rewards the customer can't yet afford are visibly greyed out.

Reports & Dashboards

Manager-level visibility into feedback quality, ratings, and loyalty engagement.

Average Rating by Store (Illustrative)

Reports

Report: Feedbacks

Customer Feedback Report

Edit

	Customer Name	Feedback Type	Rating	Feedback Date
1	Rahul Sharma	Product	5	9/1/2026
2	Priya Singh	Service	4	9/2/2026
3	Amit Kumar	Staff	3	9/3/2026
4	Neha Verma	Store	5	9/4/2026
5	Rohit Gupta	Delivery	4	9/5/2026

Report: Redemption

Reward Redemption Report

Edit

	Customer Name	Reward Name	Points Used	Redemption Date
1	Rahul Sharma	₹50 Discount	100	9/1/2026
2	Priya Singh	₹100 Discount	200	9/2/2026
3	Amit Kumar	Free Product	300	9/5/2026
4	Neha Verma	Premium Reward	500	9/6/2026
5	Rohit Gupta	₹50 Discount	100	9/7/2026

Top Rewards Redeemed

Customer Loyalty Points

Why This Matters

- Feedback becomes a two-way relationship, not a one-time form.
- Automatic point rewards keep customers coming back to engage.
- A profanity filter keeps reviews clean without manual moderation.
- Managers get a clear, ongoing read on ratings and loyalty health.

Ready for review and next-step planning.
